PROJECTS

MoodMatch

Emotion Based Music
Recommendation Website

In this project we propose a new approach for playing music automatically using facial emotion. Facial expressions are captured using an inbuilt camera. Feature extraction is performed on input face images to detect emotions such as happy, angry, sad, surprise, and neutral. Automatically music playlist is generated by identifying the current emotion of the user.

Python

Node.js

MongoDb

Hotel Mangemant System

Database

Crafted an interactive Website allowing users to Book hotel rooms and restaunt tables and give access admin to look data of how many people have arrived and stayed in thier hotel. convenient for customers to know how many rooms and table are available to use.

Java

Firebase

Android Studio
